Dear Google Pixel Support,

I am following up on case 8-4585000041338 regarding my Pixel 8 Pro (Order GS.4760-7103-3200). During my consultation on 19 June 2026, the issue was categorized as a soft

 pixel-logs-extra.zip

ware problem; however, my technical diagnostics indicate a hardware-level failure of the Broadcom 4398 Wi-Fi/Bluetooth combo chip.

The device, purchased from the Google Store Australia on 12 October 2023, has developed a significant fault where Wi-Fi and Bluetooth functions are permanently disabled. While mobile data remains functional via the separate modem, the Wi-Fi/Bluetooth subsystem is unresponsive.

To troubleshoot this issue, I have completed the following:

- Performed factory resets and flashed the latest official stock firmware.
- Reproduced the issue on a clean stock build.
- Analyzed [system logs](#) showing repeated Bluetooth HAL crashes and Wi-Fi HAL timeouts.

[These logs](#) indicate PCIe link and HAL timeouts, which suggest a physical hardware defect. As the device can no longer utilize Wi-Fi or Bluetooth, this is a loss of core functionality that I believe falls under the protections of Australian Consumer Law (ACL).

Given these findings, I would appreciate it if this could be reviewed as a hardware failure. I am hoping we can arrange for a no-cost repair or a replacement device if a repair isn't possible.

Device Details:

- Model: Pixel 8 Pro (Husky)
- Order ID: GS.4760-7103-3200
- Purchase Date: 12 October 2023
- Case ID: 8-4585000041338
- Country: Australia

I have attached my proof of purchase and provided [detailed error logs](#) at the following link: <https://drive.google.com/file/d/1h9hUB-7BnseMhz3AGQmuM2J1WnO1PNSc/view?usp=sharing>

Please update the case notes to reflect this information and advise on the next steps for repair or replacement.

Thank you,

Nishant Dougall
